

Leverage CRM — System Architecture & Tech Stack v1.0

Developer: Rao Humza Majeed

Date: 13/Oct/2025

Version: 1.0

System Overview

Leverage CRM is an integrated command center for Amazon wholesale sellers, designed to centralize outreach, supplier relations, operations, and profit tracking in one system.

The architecture enables automation, real-time analytics, and smooth Amazon SP-API integration.

Data Flow Description

The frontend communicates with the backend via REST APIs. Backend processes requests, applies business logic, and interacts with the PostgreSQL database. External APIs (Amazon SP-API, OpenAI, Gmail) integrate directly through secure endpoints to sync or generate data.

System Architecture Diagram

Tech Stack

Layer	Technology	Purpose
Frontend	React + Tailwind CSS	Fast, responsive, modern UI
Backend	Node.js (Express.js or NestJS)	REST APIs + scalable logic
Database	PostgreSQL	Relational DB for CRM data
ORM	Prisma ORM	Easier DB handling and schema migrations
Authentication	JWT (JSON Web Tokens)	Secure login system
AI Integration	OpenAI API / GPT	Outreach automation and message generation
Amazon Integration	Amazon SP-API	Data sync (sales, stock, refunds)
Email Sync	Gmail / Outlook APIs	Contact and communication sync
Deployment	AWS or Vercel	Hosting + scaling
Version Control	GitHub	Code management
Docs & Tracking	Notion + Loom	Internal documentation + video demos

Security & Auth

Authentication handled through JWT; HTTPS for all endpoints; environment variables managed securely using dotenv and AWS Secrets Manager.
